

TABLE OF CONTENTS

To the memory of Giovanni Sacchi Landriani	1
Preface	3
Invited lectures	
The p - and h - p version of the finite element method, An overview <i>I. Babuška and M. Suri</i>	5
Chebyshev collocation solutions of flow problems <i>M.O. Deville</i>	27
Spectral simulation of an unsteady compressible flow past a circular cylinder <i>W.-S. Don and D. Gottlieb</i>	39
Propagation of error into regions of smoothness for non-linear approximations to hyperbolic equations <i>R. Donat and S. Osher</i>	59
A high-order Lagrangian-decoupling method for the incompressible Navier-Stokes equations <i>L.-W. Ho, Y. Maday, A.T. Patera and E.M. Rønquist</i>	65
Optimal error analysis of spectral methods with emphasis on non-constant coefficients and deformed geometries <i>Y. Maday and E.M. Rønquist</i>	91
Iterative solvers by substructuring for the p -version finite element method <i>J. Mandel</i>	117
The Chebyshev multidomain approach to stiff problems in fluid mechanics <i>R. Peyret</i>	129
Lax-stability of fully discrete spectral methods via stability regions and pseudo-eigenvalues <i>S.C. Reddy and L.N. Trefethen</i>	147
Dispersion-bounded numerical integration of the elastodynamic equations with cost-effective staggered schemes <i>P. Sguazzero, M. Kindelan and A. Kamel</i>	165
Vortex structure and dynamics in turbulence <i>Z.-S. She, E. Jackson and S.A. Orszag</i>	173

The p - and h - p versions of the finite element method in solid mechanics <i>B.A. Szabo</i>	185
Shock capturing by the spectral viscosity method <i>E. Tadmor</i>	197
Spectral methods for simulations of transition and turbulence <i>T.A. Zang</i>	209
Section 1. Algorithms for incompressible Navier–Stokes equations	
A spectral method for time modulated Taylor–Couette flow <i>C.F. Barenghi</i>	223
Spectral methods for the Stokes problem in stream-function formulation <i>C. Bernardi, G. Coppoletta, V. Girault and Y. Maday</i>	229
A collocation method based on the influence matrix technique for Navier–Stokes problems in annular domains <i>A. Chaouche, A. Randriamampianina and P. Bontoux</i>	237
A nonlinear Galerkin method for the Navier–Stokes equations <i>F. Jauberteau, C. Rosier and R. Temam</i>	245
A three-dimensional pseudo-spectral algorithm for the computation of convection in a rotating annulus <i>P. Le Quéré and J. Pecheux</i>	261
Numerical simulation of the regularized driven cavity flows at high Reynolds numbers <i>J. Shen</i>	273
Section 2. Multigrid and preconditioning methods	
Algebraic spectral multigrid methods <i>W. Heinrichs</i>	281
Theoretical analysis of some spectral multigrid methods <i>R. Muñoz</i>	287
On the spectrum of the iteration operator associated to the finite element preconditioning of Chebyshev collocation calculations <i>P. Francken, M.O. Deville and E.H. Mund</i>	295

Iterative methods with spectral preconditioning for elliptic equations

H. Guillard and J.A. Desideri 305

On the eigenvalues of second-order spectral differentiation matrices

H. Vandeven 313

Section 3. Domain decomposition, spectral elements, h - p finite elements

The h - p version of the boundary element method with geometric mesh on polygonal domains

I. Babuška, B. Guo and E.P. Stephan 319

A hierarchic family of conforming finite elements for the solution of plate bending problems

C. Chinosi, G. Sacchi and T. Scapolla 327

Pseudospectral multi-domain method for incompressible viscous flow computation

A. Farcy and T. Alziary de Roquefort 337

Coupling of two-dimensional hyperbolic and elliptic equations

F. Gastaldi, A. Quarteroni and G. Sacchi Landriani 347

A Legendre spectral element method for simulation of unsteady incompressible viscous free-surface flows

L.-W. Ho and A.T. Patera 355

Spectral element-Fourier methods for incompressible turbulent flows

G.E. Karniadakis 367

Pseudospectral matrix element methods for flow in complex geometry

H.C. Ku, T.D. Taylor and R.S. Hirsh 381

Spectral domain decomposition techniques for viscous incompressible flows

T.N. Phillips 389

Section 4. Algorithms for compressible Navier-Stokes equations and hyperbolic problems

Fourth order schemes for the heterogeneous acoustics equation

G. Cohen and P. Joly 397

Pseudospectral simulation of compressible magneto-hydrodynamic turbulence <i>R.B. Dahlburg and J.M. Picone</i>	409
A Hamiltonian explicit algorithm with spectral accuracy for the 'good' Boussinesq system <i>J. De Frutos, T. Ortega and J.M. Sanz-Serna</i>	417
Calculations of non-Boussinesq convection by a pseudospectral method <i>J. Frölich and R. Peyret</i>	425
A semi-implicit collocation method: Application to two-dimensional compressible convection <i>S. Gauthier</i>	435
Section 5. Approximation of problems in unbounded domains	
Truncation versus mapping in the spectral approximation to the Korteweg-De Vries equation <i>N. Bressan and D. Pavoni</i>	443
Laguerre spectral approximation of elliptic problems in exterior domains <i>O. Coulaud, D. Funaro and O. Kavian</i>	451
Pseudospectral methods with open boundary conditions for the study of atmospheric wave phenomena <i>C.E. Wasberg and Ø. Andreassen</i>	459
Spectral methods and mappings for evolution equations on the infinite line <i>J.A.C. Weideman and A. Clood</i>	467
Section 6. Parallelism in high order methods	
Analysis and application of a parallel spectral element method for the solution of the Navier-Stokes equations <i>P.F. Fischer</i>	483
Pseudospectral methods on massively parallel computers <i>R.B. Pelz</i>	493
